

Swaggy Website

As GIP DEV Team 5, we've chosen the 2nd challenge, which was building a swaggy store for teenagers.

Swaggy website is a full responsive e-commerce website that focuses on guiding the user to check & buy products from different categories.

First of all, we did the conception part, that includes the structure & UI of the website

Link: [GIP Challenge 2 – Figma](#)

In this website, we've used Bootstrap & React Js as the main technologies for our website

Here's the link of the repository: [AmineBrd/GIP_Challenge02 \(github.com\)](#)
